The principle behind CEECALM

ACOUSTIC STIMULI FOR MORE RELAXED HORSES

‡ The way in which CEECALM works is based on horses' social behaviour. For instance, the sound of a horse grazing has a soothing effect on other horses. We analysed these natural trigger sounds and put them together so that you can use them to reduce symptoms of stress in your horse even in different situations with the aid of CEECALM.

SIMPLE, VERSATILE, ANYWHERE

‡ We have designed CEECALM as a compact unit that is simple to use anywhere. This means you can quickly and easily ensure that your horse is relaxed in a range of situations, such as during transport or veterinary examinations. Thanks to the use of natural sounds, the overall effect is harmonious, even if several units are playing at the same time. The device is also endorsed by professional users like Isabell Werth.

An acoustic approach to calming horses

‡ Tested and further developed under veterinary guidance, CEECALM uses specific acoustic stimuli to relax horses and reduce agitation in stressful situations. The result: markedly calmer horses.

Soothing made simple

- 1 SWITCH ON CEECALM
- 2 ADJUST VOLUME TO THE SURROUNDINGS
- 3 ALLOW IT TO TAKE EFFECT

How can CEECALM be used?

CEECALM CAN RELAX HORSES IN MANY SITUATIONS

- Getting used to a new environment or owner
- Calming horses during transport and loading
- Reducing stress during veterinary examinations
- Distraction when horses are separated
- General relaxation in stables
- Preventing fear, e.g. during storms

“CEECALM really is an amazing device. It is easy to transport, meaning that it helps to calm stressed horses in all sorts of places. That’s important because you can only train productively and ride successfully if the horse is relaxed.”
